## **ABSTRACT**

**MABANSAG, RODENALYN D. Self- Concept, Work Attitude and Gay Language of selected gays in the municipality of Indang, Cavite.** Undergraduate Thesis. Bachelor of Science in Psychology Cavite State University, Indang, Cavite, April 2007. Thesis Adviser Ms. Evalyne A. Rodriguez.

This research investigated the self-concept, work attitude and gay language of selected gays in the municipality of Indang, Cavite. Specifically, it aimed to assess the respondents demographic profile in terms of age, educational attainment and occupation; to assess the self- concept of the respondents; to assess the attitudes of respondents towards their work; to assess the significant relationship between self concept and language of the respondents; to assess the significant relationship between the work attitude and gay language of the respondents; and to assess the self-concept and work attitude of the selected gays in the municipality of Indang, Cavite.

This research was conducted at the municipality of Indang, Cavite in the month of October 2006 to January 2007. A descriptive normative-survey method of research was used in the study. Seventy-one (71) gays coming from the municipality of Indang were the respondents of the study.

Out of 71 respondents, 37 or 52.1 percent were 25 yrs and below; 19 or 26.8 percent of the respondents aged 26 to 30 yrs; 15 or 21.1 percent of the respondents were 31 yrs and above. The findings imply that the respondents were mostly young adults. In educational attainment, there were three (3) or 4.2 percent of the respondents finished elementary; 50 or 70.4 percent High School Graduate and 18 or 25.4 percent of the

respondents finished college. There were 31 or 43.7 percent were beautician; 4 or 5.6 percent were vendor; 13 or 18.3 were Helper; 2 or 2.8 were Government Employee; 14 or 19.7 were factory worker; 3 or 4.2 were self employed lastly 4 or 5.6 were Teacher.

Most of the respondents were on the high level of self concept as well as their work attitude.

This study revealed that there is a significant relationship between self-concept and gay language of the respondents. Also, it revealed that there is no significant relationship between work attitude and gay language of the respondents. And lastly, that finding implies that there is a significant relationship between self- concept and work attitude of selected gays in the municipality of Indang.

## **Introduction**

Equality has always been a dream of the homosexual. It is a dream that will never turn into reality as long as homophobia exists in society. It is an unfamiliar term but a common attitude of many people. Homophobia is a gender related issue that is present in different fields.

Homosexuality is a sexual preference for members of one's own gender.

Today, there is enough evidence in the society that the case regarding these so called "third sex" population or commonly called as the homosexuals is soaring high. Its population in the community is noticeably rising especially to the teenage bracket. They are prevalent in different kinds of community especially in the universities, which is a big influence to what a person would become. The researcher want to know how they become one and or why they became one. Doing a study like this does not only interest the researcher but also the respondents as well. It is a simple subject and very common and applicable especially to the present times. Some people agree that to be trapped in
