## ABSTRACT

**LEJANO GLORIFE B. Profile, Parental Bonding and Trust Level to Partner of Teenage Pregnant Women in Poblacion of Municipality of Silang Cavite.** Undergraduate Thesis Bachelor of Science in Psychology April 2013. Adviser: Ms. Mary Joyce B. Eyaya.

The study entitled "Profile, Parental Bonding and Trust level to Partner of Teenage Pregnant Women in Silang, Cavite." was conducted from November 2012 to December 2012 at the Poblacion of Silang, Cavite. A total of 48 teenage pregnant women were involved in this study as participants.

This study aimed to determine the significant relationship between parental bonding and trust level to partner of teenage pregnant women in Poblacion of Municipality of Silang, Cavite.

The researcher used the descriptive-correlational design. The respondents of the study were chosen based on the criterion that the researcher set. To answer the problems stated in this study, mean, frequency, percentage, standard deviation, and Pearson moment correlation were used to analyze the data gathered in this study.

Finding shows that the participants belong to poor families and most of them only attained high school education. The participants were found to have a high bonding towards their father and mother. Similarly, participants have a high trust on their partner. Moreover, in terms of educational attainment of the participants and their bonding level towards their mother, it was revealed that as they attained higher level of education, their level of bonding towards their mother also increases. On the same note, family income has a connection with the level of trust of the participants with their partner, which indicates that as the income increases, the level of trust the level of trust decreases.

Lastly, parental bonding and trust to partner has significant relationship, results implies that as parental bonding increases trust, level also increases.
