ABSTRACT

ESTONILO, CHRISTOPHER G., Development of Computerized Student's Statement of Account and Collections Recording System of CvSU-Rosario (A Software Module of Computerized Enrollment System). Practicum Narrative Report Manuscript. Master in Information Technology (MIT). November 2012. Adviser: Ms. Charlotte B. Carandang.

The practicum was conducted at Cavite State University – Rosario from October 2011 to May 2012 with 500 hours completed. The objective of the practicum is to develop a computerized student's statement of account and collections recording systems of Cavite State University-Rosario.

The developer intended to develop the system because of the traditional transaction happens in the offices of the Registrars, Accounting and Cashier. There are problems in the assessment of fees, payment of fees, recording of collections and inquiry of student's tuition fees.

To develop the new system, the developer used Object-Oriented Method, particularly the used of Interactive Model and a set of Project Management Tools for the development of the new system called Computerized Student's Statement of Account and Collection Recording System of CvSU-Rosario. In the interactive model, the stage of planning, analyzing and designing tasks interacted continuously that produced the prototypes as tested, evaluated and implemented. The developer used Microsoft Visual Basic.Net for the interface and MySQL for the system's backend.

As a result, the developed system was evaluated for possible deployment in the University. The criteria used are: functionality, content, reliability, availability, maintainability and saleability. The evaluators were composed of the

IT instructors, students, and possible users in the offices of Registrar, Accounting, and Cashier. The new system passed all the given criteria in the evaluation and met all the requirements of the software. It provides solution to the problems identified from the traditional transaction of enrollment of the University.

Furthermore, the modules of the system were designed toward a full-blown enrollment system of Cavite State University-Rosario. The trainee finished the training on the given period of time and developed a system called Computerized Student's Statement of Account and Collections Recording System of CvSU-Rosario.

¹A Narrative Report submitted to the faculty of the College of Engineering and Information Technology, Cavite State University – Main Campus, Indang, Cavite in partial fulfillment of the requirements for the degree, Master of Information Technology. Prepared under the supervision of Ms. Charlotte B. Carandang.

INTRODUCTION

In today's generation, according to Shelly and Cashman (2009), information technology affects businesses, large and small. Companies use information as a weapon in the battle to increase productivity, deliver quality products and services, maintain customer loyalty, and make sound decisions. In a global economy with intense competition, information technology can mean the difference between success and failure.

Even some transactions and inquiries in universities and colleges are made easy by using computerized system to enhance the enrollment, library and payroll processes for the benefit of the administration, faculty, employees and students. Enrollment system is one of the major factors that affect the potentials and credibility of one school. Typically, it starts with advising of academic subjects, assessment of fees for every student, and then everything follows.
