CONTENTS

Preface	iii
Acknowledgments	iv

Chapter 1 PLANT AND ANIMAL ORGAN SYSTEMS AND THEIR FUNCTIONS -I 1

Subtopics	Learning Competencies	Page
1.1 Transport and Circulation	Compare and contrast transport and circulation in plants and animals.	2
1.2 Gas Exchange and its Control	Compare and contrast gas exchange in plants and animals	20
1.3 Chemical and Nervous Control	Compare and contrast chemical and nervous control in plants and animals.	39
Summary		62
Chapter 1 Review		66
Chapter 1 Assessment		73

Chapter 2 PLANT AND ANIMAL ORGAN SYSTEMS AND THEIR FUNCTIONS -II 77

Subtopics	Learning Competencies	Page
2.1 Regulation of Body Fluids	Describe the excretory systems in animals especially the human urinary system and their functions in homeostasis.	78
2.2 Sensory Mechanisms	Describe the structures and functions of organs involved in major animal senses.	101
2.3 Motor Mechanisms	Describe the structures and functions of organs involved in motor mechanisms and systems.	109
Summary		118
Chapter 2 Review		121
Chapter 2 Assessment		125

Chapter 3 **PLANT AND ANIMAL ORGAN SYSTEMS AND THEIR FUNCTIONS - III**

129

Subtopics	Learning Competencies	Page
3.1 Reproduction and Development	<ul style="list-style-type: none"> • Compare various modes of asexual and sexual reproduction. • Compare and contrast different types of plant life cycles, and explain processes in flowering plant reproduction and development. • Describe the human reproductive system and illustrate the human female menstrual cycle. • Explain the process of human development. 	130
3.2 Nutrition	Compare and contrast nutrient procurement and processing in plants and animals.	173
Summary		182
Chapter 3 Review		185
Chapter 3 Assessment		189

Chapter 4 **PLANT AND ANIMAL ORGAN SYSTEMS AND THEIR FUNCTIONS -IV**

193

Subtopics	Learning Competencies	Page
4.1 Feedback Mechanisms	<ul style="list-style-type: none"> • Explain how some organisms can maintain steady internal conditions. • Describe examples of homeostasis (e.g., temperature regulation, osmotic balance and glucose level regulation) and the major features of feedback loops that produce homeostasis. 	194
4.2 Immunity	<ul style="list-style-type: none"> • Explain how immune systems work. • Describe how immune systems contribute to homeostasis. • Describe the importance of immune systems. 	200
Summary		213
Chapter 4 Review		215
Chapter 4 Assessment		219

Chapter 5 CLASSICAL GENETICS 223

Subtopics	Learning Competencies	Page
5.1 Mendelian Genetics	Predict genotypes and phenotypes of parents and offspring using the laws of inheritance..	224
5.2 Deviation from Mendelian Inheritance	<ul style="list-style-type: none"> • Explain sex linkage and recombination. • Describe modifications to Mendel's classic ratios (gene interaction). • Construct pedigrees and predict genotypes based on pedigree analysis. 	235
5.3 DNA and Genetic Information	Illustrate the molecular structure of DNA and RNA.	248
5.4 DNA Replication	Illustrate the steps in DNA replication.	255
5.5 Protein Synthesis : Transcription and Translation	Illustrate the steps in transcription and protein synthesis.	263
Summary		273
Chapter 5 Review		277
Chapter 5 Assessment		283

Chapter 6 MODERN GENETICS 287

Subtopics	Learning Competencies	Page
6.1 Recombinant DNA Technology	<ul style="list-style-type: none"> • Compare classical breeding with modern genetic engineering techniques. • Outline the steps involved in genetic engineering. 	288
6.2 Applications in Recombinant DNA Technology	Discuss the applications of recombinant DNA technology	298
Summary		303
Chapter 6 Review		304
Chapter 6 Assessment		307

Chapter 7 EVOLUTION AND ORIGIN OF BIODIVERSITY 311

Subtopics	Learning Competencies	Page
7.1 History of Life on Earth	Describe general features of the history of life on Earth, including generally accepted dates and sequence of the geologic time scale and characteristics of major groups of organisms present during these time periods.	312
7.2 Gene Pool and Hardy-Weinberg Principle	Explain the mechanisms that produce change in populations from generation to generation.	315
7.3 Patterns of Descent with Modifications	Show patterns of descent with modification from common ancestors to produce the organismal diversity observed today.	324
7.4 Evolutionary Thought and Evidences	<ul style="list-style-type: none"> Trace the development of evolutionary thought. Explain evidences of evolution (e.g. fossil record, biogeography, DNA/ protein sequences, homology and embryology). Infer evolutionary relationships among organisms using the evidences of evolution. 	343
Summary		357
Chapter 7 Review		359
Chapter 7 Assessment		363

Chapter 8 SYSTEMATICS BASED ON EVOLUTIONARY RELATIONSHIPS 367

Subtopics	Learning Competencies	Page
8.1 The Purpose and Importance of Systematics	Explain the purpose and importance of systematics.	368
8.2 Classification Systems	<ul style="list-style-type: none"> Explain how the structural and developmental characteristics and relatedness in DNA sequences are used to classify living things. Describe species diversity and cladistics, including types of evidence and procedures that can be used to establish evolutionary relationships. 	369
8.3 Taxonomy	Identify the unique/distinctive characteristics of a specific taxon relative to other taxa.	374
Summary		379
Chapter 8 Review		380
Chapter 8 Assessment		383

Answers	387
Glossary	418
Index	422

SENIOR HIGH SCHOOL

General Biology 2

This book is written for senior high school students enrolled in General Biology 2. The topics are aligned with the Science, Technology, Engineering and Mathematics (STEM) Strand of the K to 12 Basic Education Curriculum. This will also be useful as an introductory book in biology for students who have not taken any formal course in the subject.

KEY FEATURES

- Comprehensive notes to help students learn and understand the important concepts and theories related to biology
- Illustration of biological structures and processes that visually explain biological concepts
- Summary of key concepts at the end of each chapter for quick revision
- Check Point questions to assess and reinforce students' understanding of subtopics before coming to the end of each chapter
- Chapter Review and Chapter Assessment to assess students on their comprehension of the concepts learnt. Answers for Check Point and Chapter Review are provided at the end of the book

Jessica Domingo Rey, PhD is an Assistant Professor at the University of the Philippines Diliman. She has 25 years of combined teaching and research experience specializing in plant developmental biology, molecular genetics and genomics being utilized for germplasm conservation of both agricultural crops and Philippine native tree species.

Joie Moliñawe Ramos is currently a Senior Associate Scientist 1 – Plant Breeding at the International Rice Research Institute (IRRI), Los Baños, Laguna. She has more than 20 years of experience in rice research, particularly in rice genetics and molecular breeding. Her projects involve the use of exotic germplasm for rice improvement and breeding for increased yield potential. Moreover, she is now working under the Breeding for the Marginal Environment Cluster of the Rice Breeding Platform specializing on problem soils.
