Tha Farm Practice which involved the student's participation and actual application of theoretical knowledge on broiler management was conducted in the Poultry Project of the Don Severino Agricultural College from October 18 to December 7, 1982.

A total of 200 day old chicks were raised in the project. The broilers were fed with commercially prepared feeds with corn grit and vitamins preparation. Each bird consumed an average of 3.903 kilograms of feeds, and gained an average body weight og 1.5 kilograms in seven week feeding period. This performance in terms of feed conversion gave an efficiency rate of 2.58 or 2.6.

The net return realized per bird was ₱2.82.

BROILER PRODUCTION^{1/}

by

Amorlina S. Masungsong

¹Farm Practice Report presented to the Faculty of the Department of Animal Science, DSAC, Indang, Cavite in partial fulfillment of the requirements for graduation on April 1983 with the degree of Bachelor of Science in Agriculture (BSA), Major In Animal Husbandry under the direct supervision of Mr. Apolinar A. Umali (Adviser) and Mr. Esguerra (Supervised Farming Program Adviser).

INTRODUCTION

Broiler production is a high specialized enterprise. It is an interesting hobby or occupation which may be undertaken at home or as commercial enterprise by housewives.

However, the presence of various problems confronting the raisers in their management practices such as method of feeding, as well as the quality and quantity of feeds to be used, resulted to the failure and losses in the production of good quality poultry meat.

Importance of the Study

Raising broiler is gaining popularity in our locality, even to barrios and it is considered as a lucrative enterprise. Return from investment could be realized in a short period; however, production cost is
