Table of Contents

Preface

ix

Chapter 1	Introduction to Soil Fertility	1
	Chemical Fertilizers	13
	Soil Fertilization	18
	Soil Quality	20
	Soil Fertility: Definition, Types and Factors in Soil Science	23
	Soil Structure and the Physical Fertility of Soil	27
 Chapter 2	 Soil Fertility and Soil Productivity	 33
	Soil Fertility and Productivity	33
	Healthy Soils are the Basis for Healthy Food Production	35
	Soil Fertility – Its Meaning, Causes and Maintenance	36
	Soil Erosion: Effect on Soil Productivity	50
	Additional Soil Fertility and Nutrient Amendments	51
	Manure and Fertilizers	55
	Plant Nutrition	56
	The Basics of Plant Nutrient Management	60
	The Source of Plant Nutrients	61
	Nutrient Deficiency Symptoms of Plants	63

Chapter 3	Soil and Fertilizer Phosphorus	68
	Phosphorus in Soil and Plants	68
	Fertilizer Basics	71
	Soils and Fertilizers	74
	Phosphorus Behaviour in Soil	86
	Phosphorus Fertilizer Application in Crop Production	91
Chapter 4	Factors Affecting Phosphorus Availability in Soils and Fertilizers	106
	Phosphorus in the Plant	108
	Essential Role of Phosphorus in Plants	114
	Phosphorus Availability in Soil	119
	Soil Phosphorus Availability and Lime: More than just pH?	120
	Understanding Phosphorus Behaviour in Soils	122
	Mineralization (Soil Science)	124
	Nitrogen in the Environment: Mineralization — Immobilization	125
	Immobilization (Soil Science)	126
	Immobilisation of Soil Nitrogen in Heavy Stubble Loads	126
	Immobilization in Soils	131
	Soil Reaction	132
	Soil Reaction: Types, Factors and Influence	133
	Soil pH	136
	Behaviour of Phosphate Fertilizers in Soils	143
	Phosphatic Fertilisers	144
	Measuring Sodicity/Alkali Status of Soils	145
Chapter 5	Soil Fertility Evaluation	160
	Methods of Soil Fertility Evaluation	160
	Soil Fertility Evaluation: Greenhouse and Field experiments	161
	Soil Fertility Evaluation and Deficiency Symptoms	165
	Evaluating a Soil's Fertility	187
	Biological Methods	189
	Measuring the Fertility of Soil: 10 Biological Tests	191
	Methods to Understand	193
	Evaluate Soil Fertility in Soil Management	205
	Understanding Plant Tissue Analysis	209
	Multidisciplinary Aspects of Sustainable Soil Management	211
	Approaching a National Level of Sustainable Soil Management	220
Chapter 6	The Farm in its Wider Connections and Soil Fertility	224
	Soil: The Foundation of Agriculture	224
	Soil Degradation and Crop Production	230

Soil Fertility in Organic Farming Systems: Much More than Plant Nutrition	239
Chapter 7 Soils and Plant Nutrients	243
Introduction	243
Physical Properties of Soil	245
Organic Matter	248
Chemical Properties of Soil	250
Soil Testing	250
Plant Nutrition and Fertilization	254
The Biology of Soil	259
Social and Cultural Factors in Extension	260
Social and Cultural Barriers to Agricultural Change	270
Managing Phosphorus for Agriculture and the Environment	272
Chapter 8 The Soil, a Living Organism: The 'Load Limit' in Agriculture .	284
Soil Structure	286
Effects of Organic Matter on Soil Properties	290
Soil Composition and Formation	299
Impact on Surface Waterbodies	314
Soil Biology and the Landscape	316
Organic Matter: What it is and why it's So Important	321
<i>Bibliography</i>.....	324
<i>Index</i>.....	329

SOIL FERTILITY, RENEWAL AND PRESERVATION

Soil fertility is a concept based on the amounts of essential nutrients available to the plants. The plant nutrients involved are classified as macronutrients such as nitrogen (N), phosphorous (P), potassium (K), calcium (Ca), magnesium (Mg), and sulfur (S); or as micronutrients such as Iron (Fe), manganese (Mn), copper (Cu), zinc (Zn), boron (B), and molybdenum (Mb). The amount of each of these nutrients is not the only factor in determining whether there are nutrient shortages. Soil pH (acidity) is also important because under certain pH conditions, nutrients form insoluble compounds which are unavailable to be taken up by plant roots. A shortage of any of these elements in the soil can slow crop development and reduce yields, something which extensionists should consider when working with farmers to improve crop production. Soil Fertility is the ability of soils to supply the nutrients to crops in the form, proportion and amount favourable for their growth and yield. Nutrient cations occur in the soil solution and are loosely held by clay/humic micelle as exchangeable cations and are also fixed by clay minerals in the form of non-exchangeable cations. Nitrate, sulphate and phosphate anions are loosely adsorbed on the surface of hydrous oxides of iron and aluminium in acidic soils and on the surface of calcite in alkaline soils and are also fixed in the non-exchangeable form. The book is concerned primarily with the interrelationships of soils and growing plants. It has been prepared as a textbook for students taking a course in soil fertility and as a reference book for students in soil management courses.

Contents: 1. Introduction to Soil Fertility, 2. Soil Fertility and Soil Productivity, 3. Soil and Fertilizer Phosphorus, 4. Factors Affecting Phosphorus Availability in Soils and Fertilizers, 5. Soil Fertility Evaluation, 6. The Farm in its Wider Connections and Soil Fertility, 7. Soils and Plant Nutrients, 8. The Soil, a Living Organism: The 'Load Limit' in Agriculture.

Ethan Schinner is a professor of agricultural sciences at the Munich University. He teaches biodynamic agriculture in Germany and helped found the Biodynamic Farming & Gardening Association. He is German farmer, educator and organic farming researcher. He studied agriculture and obtained all his degrees from the German University. He has played a pivotal role in globalization of research in Germany with special emphasis to scientific exploration of soil in rural Germany. He was awarded prestigious Endeavour Award from Ministry of Higher Education, Government of Australia and for an advanced level research on soil at University of Canberra, Australia. He has visited number of countries for different academic and research interactions and delivered number of lectures and serves on external expert panels for different government regulatory bodies/Universities. His innovations and research has yielded many international publications in reputed journals out of which some are indexed in Scopus. He has to his credit five patents, five authored and edited books. He is a recognized scientist for different works of Department of Science & Technology, Germany, and acts as host scientist for different visiting scientists of developing countries.
