# Wildlife Habitat Management

Earth's biodiversity is at risk because of deforestation, population increase and increasing pollution. Wildlife habitat management is the discipline which focuses on preserving the wildlife from the ill effects of human actions and creating and maintaining a balance between the wildlife and human civilization. This subject uses elements of geography, ecology, chemistry, climatology, biology, etc. This book unfolds the innovative aspects of wildlife habitat management which will be crucial for the holistic understanding of the subject matter. Most of the topics introduced in it cover new techniques and the applications of the area. This textbook, with its detailed analyses and data, will prove immensely beneficial to professionals and students involved in this area at various levels.

**Vincent Green** pursued his MSc in Biodiversity and Conservation from the University of Leeds, United Kingdom. He has wide-ranging areas of academic and research interests, which include habitat conservation and reason for extinction. He has also been an invited speaker at various international conferences. Green has also won the "Distinguished Faculty Lecturer Award" for his outstanding contribution towards the student community especially in the undergraduate programs.
