The Authors	

The Book

Science, Technology, and Society serves as a guide for understanding both the simple and complex ways that science, technology, and society come together in the world today. It first presents a general and historical overview of scientific and technological developments that shaped early societies and, consequently, modern thought. It then discusses how these developments affect the human condition, highlighting ancient and modern concepts of human flourishing, providing an insightful exploration of the good life, and looking ahead into the future of humanity. Lastly, it provides information on specific issues plaguing modern-day society, such as climate change and energy crisis, as a way of raising awareness about the consequences of science and technology, as well as human advancement. This textbook also includes tests, exercises, and learning activities tailored to aid the students in grasping the core concepts of Science, Technology, and Society as a general education subject.

Excello™ is a continuously expanding aggregation of high-quality learning assessments designed to help students master the Philippine curriculum's key skills and provide teachers with easy-to-use test creation tools.
