ABSTRACT

ALDUÑAR, SHEJAN ALEXANDRA T., BACULOT, JOHN LLOYD L., CORTEZ, WARREN C., HERNANDEZ, TRISTAN RAIZEN D. and MACARAEG, JOCELLE O.
The Efficiency of Implemented Modified Security Measures and Policies in Cavite State University-Main Campus. Undergraduate Thesis. Bachelor of Science in Industrial Security Management. Cavite State University, Indang, Cavite. June 2022.
Adviser: Mr. Clinton G. Bedso.

The study was conducted to determine the efficiency of modified security measures and policies being implemented at Cavite State University-main campus. This can help to improve or develop the existing and modified security measures and policies. It focused on the implemented modified security measures and level of efficiency of the implemented modified security measures and policies. This was done to determine if there is a significant relationship between the implementation and level of efficiency on modified security measures and policies and problems encountered by the participants. Hence, it is important to know the implementation and level of efficiency. This is to determine if the workers have skeletal workforce. And if the students who have limited face-to-face class are safe and secured while performing their tasks and duties in the workplace. This study used quantitative research design. A survey questionnaire was given to the participants including security personnel, students, housekeeping, and infirmity personnel. The findings of the study revealed that the modified security measures and policies were all implemented and efficient. Moreover, it was revealed that there were no problems encountered. Hence, result showed that there is no significant relationship between the implementation and level of efficiency and the modified security measures and policies in Cavite State University-main campus. The results of the study can provide safety and security to the people who enter and work in Cavite State University-Main Campus.

Keywords: Efficiency, Implemented, Modified, Security Measures, Policies, Access Control System, Health and Safety Protocols.

An undergraduate thesis manuscript submitted to the faculty of the College of Criminal Justice, Cavite State University, Indang Cavite in partial fulfilment of the requirements for the degree of Bachelor of Science in Industrial Security Management with Contribution No. ⁶⁶¹₁₀₁₂₂₅. Prepared under the supervision of Mr. Clinton G. Bedso, RCrim.

INTRODUCTION

Security measures can mitigate threats and reduce the amount of harm inflicted if incidents occur. In Cavite State University–main campus, the safety of the students, staff, and personnel is the topmost priority. It is important that all students and personnel provide a safe environment where they can thrive and fully engage without the distraction and worry about physical safety concerns (Hagen *et al.*, 2015).

Two years ago, when Cavite State University-main campus still conducts the face-to-face classes, only few physical security measures and policies were implemented. In the access control system, the security personnel only checked identification, bags, and there is a visitor logbook for all the outsiders who entered the campus. For all vehicles entering the campus, a sticker is required before the vehicle can enter. No modification or addition has taken place in the implementation of physical security measures and policies in Cavite State University-main campus. However, because of the emergence of the COVID-19 Pandemic, apart from the existing physical security measures and policies, there have been modifications and additions to the physical security measures and policies implemented by Cavite State University-main
